

**dooap**

Fact Sheet:

**Dooap is Every  
AP Professional's  
Best Friend**

**Dooap is a mobile-first, cloud-native accounts payable automation solution built specifically for Microsoft Dynamics 365 Finance and AX 2012.**

Dooap is a SaaS web application delivered from the Microsoft Azure Cloud that integrates seamlessly with your Microsoft Dynamics ERP system. Its modern technology stack (Azure, .NET Core) and agile development methods ensure the best user experience with all the functionalities your organization needs. Our design principles have always revolved around usability, performance, and transparency, giving you complete visibility and control over your AP process.

## Core Features

- Invoice scan, capture and validation service or in-house scanning (optional)
- e-Invoice integration
- Seamless integration with D365 Finance
  - Automatic PO matching based on Dynamics setups (2-/3-way matching)
  - Account structure validation
  - Position hierarchy
- Customizable and visual approval workflows
  - Approval groups
  - Dimension-based approvals
  - Delegations
- Workflow and coding suggestions based on invoice history (Machine learning)
- Intuitive, browser-based user interface
- Native mobile application with all the same features as desktop
- Power BI analytics and reporting
  - Performance KPIs
  - Open invoices per approver

## Authentication

End-users log in to Dooap with the same credentials they use to log in to D365 Finance and Office 365 (Azure AD). Single sign-on (SSO) is supported and only users created in Dynamics can log in to Dooap application.

## Deployment and Integration with Dynamics

Right out of the box, Dooap is seamlessly integrated with D365 Finance – leveraging all the data already in place and aligning with all Dynamics business logic and rules. With Dooap, there is no need to build any integrations.

The Dooap package is fully independent and will not conflict with any other D365 Finance modifications or vertical solutions. Dooap has its own dedicated custom APIs in D365 Finance, and the integration messaging is based on modern, real-time REST calls. No batch jobs necessary. Dooap is backward-compatible with three previous D365 versions as well as the upcoming (preview) version. Dooap integration package is delivered to D365 environments (TEST & PROD) via customer's Microsoft Lifecycle Services (LCS).

### Deployment Options

- Dynamics 365 Finance (Azure and On-Premises)
- Dynamics AX 2012 (Azure and On-Premises)

### Exceptional Technologies, Outstanding Performance

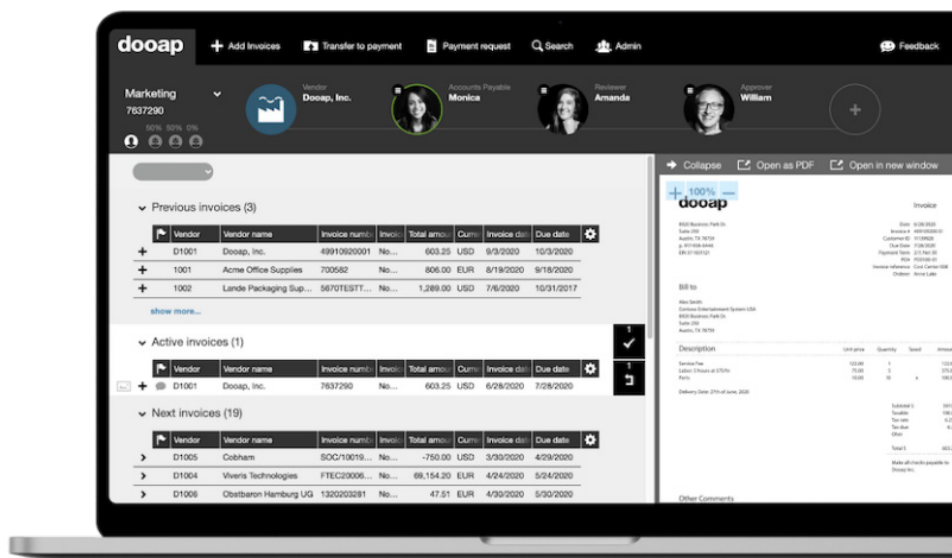

All you need is:

- Supported Dynamics version (D365 Finance or AX 2012)
- Azure Active Directory
- Supported browser (Chrome, Edge)
- Supported mobile device (iOS, Android)

## Dooap Mobile

Dooap's top-of-the-line native mobile application is available on iOS and Android. Dooap mobile authentication works through Azure AD which also provides secure communication between Dooap and D365 Finance. Our mobile application features a desktop-like experience, from invoice review and approval to coding and workflow management.

Dooap's simple and intuitive mobile app makes it easy for all users to approve invoices on the go with a simple 'swipe right' feature.

## Microsoft Azure

The full stack technology within Microsoft Azure's cloud platform enables Dooap to build, deploy, scale, and manage the application effectively across a global network of Microsoft data centers. Dooap leverages the enterprise-grade scalability and security provided by Microsoft Azure, as well as third-party services via Azure.

- All the selected Azure technologies are generally known and tested and allow full scalability for Dooap.
- All customer data is securely stored in Azure in a customer dedicated database.

Dooap utilizes Microsoft Power BI to deliver insights on your accounts payable process. Dooap utilizes machine learning for workflow and coding automation, working in real-time to improve probable handling options as your processes evolve.

## Microsoft Preferred Solution

Available on AppSource, Dooap is a Microsoft preferred solution, selected for its quality, performance, and ability to fulfill the required compatibility criteria determined by Microsoft.
